

TUSCANY COLLECTION

THE ULTIMATE QUILT BATTING

Listed in same order as samples are collated-inside first

TUSCANY SILK quilt batting is made from a very fine, pure imported silk. It is then carded and resin bonded to help retard bearding (fiber migration) and allowing the batting to be handled like a blanket. It can be quilted up to 4" apart and hand washed in tepid water and layed out to dry flat. It will likely shrink approximately 5%. Silk being a natural fiber breathes and quilts magnificently by hand or machine.

TUSCANY WOOL batting is made with the very best superwash wool which eliminates most or all of the shrinkage. It is then carded and resin bonded to help retard bearding. Tuscany wool batting provided superb insulation and the fiber breathes allowing excess heat to dispense away from the body. It can be quilted up to 4" apart and is washable. We recommend washing in tepid water by hand and laying out flat to dry. It hand quilts like a dream, and is wonderful for machine quilters as well.

TUSCANY POLYESTER made with the finest siliconized, very small denier polyester, and then resin bonded to resist bearding. We then use a unique technique that helps seal the outside and further prevent bearding. It is completely washable and may be quilted up to 4" apart. It should not shrink.

TUSCANY BLEACHED COTTON is made with fine 100% USA cotton. It's carded, and specially needlepunched to prevent bunching/ shifting and is completely washable. It will shrink 3-5% like all needlepunched 100% cotton batting. It can be quilted up to 4" apart. Bleached cotton should be used with light or white fabrics to eliminate the shading of darker battings.

TUSCANY UNBLEACHED COTTON starts with fine 100% USA cotton, is carded and specially needlepunched to prevent bunching and shifting. It is completely washable and will shrink 3-5% like all cotton batting. It can be quilted up to 4" apart and should be used primarily with medium or dark colored fabrics.
