Unlock the Secrets of Sewing Perfect Triangle Tips and Star Points for Your Beautiful Family Heirloom Quilt

Watch as an Experienced Quilter Guides You From Start to Finish, Sharing Quilting Secrets To Make Your Quilt Making Easy and Fun . . . 100% Guaranteed!

If you are anything like I am, when you look at a quilt with more than 2 triangles, you take a deep breath and seriously re-consider whether that is the quilt you **really** want to make, or whether you can find a quilt that has no triangles. For years, my triangle tips were, well, not tips at all. They looked like they had been shaved off.

And, frankly I was frustrated. Because it seems like every quilt has triangles, and who wants to struggle with patches in every quilt, or settle for cut-off points? I began to discover that there were quilters with **shortcuts for sewing triangles and techniques that made perfect triangles possible, and even easy** - by just paying attention to a few details. Several quilts later, I had gotten to the point where my triangle tips are, for the most part, pretty perfect. Simply by using the techniques and shortcuts I have learned over the years. And **you can learn how to make them perfect, too.**

Perfect Triangles Without the Pain of Trial and Error Mistakes of Learning

In an online survey a few months ago, several quilters said that they wanted to learn how to sew triangles better. Wanting to help you with your quilting challenges, I decided to put together my best techniques for sewing triangles. As you know, there are many different kinds of triangles - half-square triangles, isosceles triangles, right angle triangles, and many more I'm sure.

The challenge was to create a quilting opportunity where **you could learn how to stitch several different kinds of triangles in the same quilt**, without feeling like you were just "doing a lesson." To accomplish that, I chose two different quilt blocks - Flutter Wheels, because it has several half-square triangles, and Shining Star, because it has a few isosceles triangles that are split in the middle. And, just to throw in one more triangle, I chose an isosceles triangle, without the split in the center, for the pieced border.

Since it is easier to learn by watching video, I pulled out my camera, and took video of each and every step along the way, **revealing my techniques and tips for sewing perfect triangles in video** - tips, corners and all!

NOTHING HELD BACK!

Most quilters keep their challenges and mistakes secret, thinking that you will think less of them by exposing that they made a mistake or that something didn't turn out just the way they planned it. I think that by sharing the challenges with you, your quilting life will be easier.

So, here it is – the latest DVD Quilting Mentor – showing you step-by-step exactly how to make a bright and beautiful Fluttering Stars Quilt. The blocks are **set on point** in this quilt, which adds interest and some pizzazz. Your family and friends will be amazed when they see this quilt, and **they will wonder how you sewed it together.** And how you did it will remain our secret.

We know that you could figure it all out by yourself, but **why spend weeks, months or even years "figuring it out"** when you could simply watch the instruction and then spend time choosing your fabric and **enjoying seeing the bright smile on their faces** when you hand them a finished quilt with your stitches in it? **As you zip your**

way through these videos, you will discover:

- A simple way to square up your fabric so you are **guaranteed to cut straight strips**
- A quick and accurate way to sew isosceles triangles together, **saving you time and making your patches more square.**
- **A shortcut method for sewing those often-used half-square triangles.** This method saves you time as well as making your half-square triangles perfect square patches.
- The **no math method** for cutting the triangles to fill in the ends of the rows
- **How to center the pieced border on your quilt top without measuring**
- How to miter the corners on your final border without tears, frustration, ripping and re-sewing, or measuring to the nearest 1/32 of an inch. (This alone is worth your investment!)
- **and much more**

"I really loved your DVD, I have watched it through once and plan on going through it again. It is so nice to see things close up and get a clear explanation of the project."
 Gayle Leone, Salem, New Hampshire
